NanoASR is the latest classic 3rd generation MOSFET

Thanks to its special coating, it is resistant to atmospheric conditions.

Included in the kit:

- NanoASR
- Additional Deans-T Connector Kit
- Single signal lead for trigger contacts
- Double signal lead wire for trigger contacts

FUNCTIONS:

MOSFET

Want to get a better rate of fire and a faster reaction of the trigger? Do you plan to increase the power of your rifle? In this case, you need a MOSFET.

It directs the energy of the battery directly to the motor, neutralizing the mechanical contacts of the trigger. As a result, you will get a better shot rate from the rifle and a faster trigger reaction, and the contacts will be protected against burns.

ELECTRONIC FUSE

We know how reliable is on the battlefield. That's why our new MOSFET has thermal protection. In tandem with a timed fuse, it perfectly protects your AEG installation.

DEBOUNCING

This option offers full compatibility with microswitches. It ensures full resistance to contact rebound (vibrations). You gain a bigger ROF, a faster trigger response and your MOSFET is less subject to overheating.

3rd GENERATION MOSFET

The use of the most modern transistors and microcontroller allowed us to create the smallest and most reliable MOSFET on the market.

Made in Europe, guarantee 12 months
