Reliable and modular Hi-Capa GBB — version without Optic-Ready slide or compensator.

High-end **Gas Blowback (GBB)** replica, designed for modularity and reliability in play, in a stripped-down Optic-Ready version and without compensator.

- **Operation:** Gas Blowback (GBB)
- **Firing Modes:** Safe / Semi-Automatic
- **Length:** 20 cm (4.3" barrel)
- **Weight:** 910 g
- **Cylinder head:** CNC aluminum (standard version, not machined Optic-Ready)
- **Structure:** polymer frame
- **Internals:** MIM steel parts
- **Sights:** front and rear fiber optic
- **Rail:** Lower Picatinny for lamp/laser
- **Controls:** Left-handed adaptable magazine ejection
- **Compatibility:** Hi-Capa Tokyo Marui compatible

This standard version of the **Vanguard 4.3"** retains the essential Arcturus performance: CNC aluminum cylinder head, MIM steel internal parts and studied ergonomics. It is delivered without Optic-Ready pre-machining and without threaded compensator.

It is aimed at players who want a reliable, lightweight base that can be easily customized according to their preferences (mounting of external accessories, internal upgrades compatible with Hi-Capa TM).

Construction and materials

The **CNC-machined aluminum slide** provides realistic recoil and high strength. The **polymer frame** ensures a good balance between weight and strength, while the **MIM steel parts** ensure durability and mechanical reliability for repeated use.

Ergonomics and controls

The grip is optimized by a designed grip and **fiber optic sights** for rapid target acquisition. The configurable left-handed magazine ejection enhances adaptability in play.

Compatibility and customization

Compatible with most **Tokyo Marui Hi-Capa parts** , this version facilitates upgrades (inner barrels, springs, valves, magazines). The absence of Optic-Ready leaves the freedom to keep an original slide or to opt for custom machining/adaptation.

Maintenance and recommendations

Regularly lubricate the cylinder head and valve, check the condition of the seals and use suitable gas to ensure optimum reliability. Respect Hi-Capa compatibility for upgrade parts to avoid wear or incompatibilities.
