PG2072	REP GBB ARCTURUS VANGUARD 4.3" HI CAPA NOIR + SILENCIEUX	Vente libre	31	23	950	Gas	225.00 € incl. tax

A high-end Optic ready GBB replica with integrated compensator and compatible with many custom parts.

The **Arcturus Vanguard 4.3" GBB pistol** inaugurates the first series of gas replicas from the brand, already renowned for its exceptional AEGs. This **optic-ready** model combines modern design, performance and modularity, with careful manufacturing and high-end materials.

- **Operation:** Gas Blowback (GBB)
- **Firing Mode:** Safety / Semi-Automatic
- **Length:** 230 mm
- **Weight:** 950 g
- **Structure:** CNC aluminum cylinder head / Reinforced polymer frame
- **Compatibility:** Standard Tokyo Marui Hi-Capa parts
- **Optic Ready:** pre-machined cylinder head for micro red dot type ARS-1 or equivalent
- **Built-in compensator:** threaded, reduces barrel lift for more stable shooting
- **Sights:** front and rear fiber optic
- **Trigger and control:** ambidextrous magazine ejection
- **Picatinny rail:** for accessories (lamp, laser, etc.)
- **Internal:** MIM steel parts, optimized sealing, improved gas efficiency
- **Handle:** ergonomic stippled grip in high-strength SEFP polymer

The **Vanguard 4.3"** is the first **Arcturus GBB** designed for modern tactical use: quick to learn, easy to customize and reliable in real conditions.

Its **Optic-Ready** design and integrated compensator reduce the transition time between mechanical and electronic sights while controlling barrel elevation for cleaner rounds.

Technical characteristics & construction

The **CNC-machined aluminum slide** ensures realistic recoil and superior durability. The **reinforced polymer frame** makes the assembly lighter without sacrificing strength. The **MIM steel** internals ensure long life and increased resistance to wear associated with GBB operation.

Performance, shooting and compatibility

Operating in **Gas Blowback (GBB)** , the Vanguard offers realistic shooting behavior and responsiveness appreciated in CQB. The threaded compensator partially redirects the gases upwards to **limit the rise of the barrel** and stabilize the sequence of shots. Compatibility with **Tokyo Marui Hi-Capa parts** facilitates upgrades (barrels, magazines, valves, springs) and adaptation to the player's preferences.

Ergonomics, controls and accessories

The SEFP polymer **stippled grip** provides a secure hold even in wet conditions. Fiber optic sights ensure rapid target acquisition. The ambidextrous magazine release and Picatinny rail enhance operational ergonomics for both right- and left-handed users.

Maintenance and usage advice

For optimal longevity: regularly lubricate the cylinder head and valve, check the seals for leaks and use suitable gas (with additive if necessary for cold climates). Internal charges and upgrades must comply with **Hi-Capa** compatibility to avoid any friction or premature wear.
