## Eco-responsible Manufacturing

Made from **PLA (polylactic acid)** , a biodegradable polymer derived from natural resources like corn starch, these beads decompose naturally without harming the environment. They are an eco-friendly alternative to traditional plastic beads, addressing growing concerns about sustainability and environmental impact.

## Compatibility and Performance

With a precise diameter of **5.95 mm  $\pm$  0.01 mm** , these BBs ensure perfect compatibility with replicas equipped with tracer devices, such as tracer silencers or special hop-up chambers. Their weight of **0.30 g** is ideal for replicas displaying an energy between 1.5 and 1.9 joules, offering a perfect balance between range and accuracy.

## Instructions for Use

To fully benefit from the tracer effect, it is recommended to use these pellets with a tracer device that will activate their green luminescence when fired. If you do not have such a device, you can expose the pellets to a light source before use to temporarily activate their phosphorescence. Store the pellets in a dry place away from light to preserve their properties.
